

Nisarga N

Jr. Software Engineer

About Me

I am a dedicated Quality Analyst with 2 years of experience in ensuring software quality, reliability, and performance. With a strong eye for detail and a passion for delivering high-quality products, I am specialized in manual and automated testing, identifying defects, and ensuring compliance with industry standards.

Technical Skills

Manual testing, SQL, Agile, Core Java, Selenium WebDriver, TestNG, Cucumber, Maven, Jenkins, GIT, GitHub, Docker & Frameworks, Cypress.

Education

Bachelor of Computer Application (B.C.A)
from Mysore University

Professional Summary

- **Experience:** 2 years of experience in software testing, primarily in eCommerce projects (Unicomer, Great Health Work, and GMMCO).
- **Testing Expertise:** Skilled in Manual Testing, test planning, execution, defect tracking, and reporting.
- **Technical Skills:** Proficient in SQL, Agile methodologies, and automation tools such as Selenium WebDriver, TestNG, Cucumber, and Cypress.
- **CI/CD & Tools:** Hands-on experience with Maven, Jenkins, Git, GitHub, and for test automation and continuous integration.
- **Collaboration:** Strong ability to work with cross-functional teams to enhance software quality and optimize testing processes.
- **Quality Focus:** Dedicated to ensuring software reliability, performance, and user experience through thorough testing.
- **Continuous Learning:** Passionate about expanding technical expertise and implementing automation to improve efficiency.

PROJECT EXPERIENCE DETAILS

Project / Client Name / Location : Unicomer - USA

Duration: 9 months

Project Description: Unicomer Group is a leading retail and financial services provider operating in 26 countries across Latin America and the Caribbean. The company offers a wide range of household appliances, furniture, electronics, motorcycles, and private-label products, along with financial services such as installment loans, credit cards, and microloans. To support its operations, Unicomer has in-house developed applications, including Cosecs, which is available in both Windows and web-based versions.

Role: Jr. Software Engineer

Roles and Responsibilities:

- Executed manual test cases for COSECS applications (Windows and web versions) supporting Unicomer's retail and financial services operations across 26 countries
- Performed thorough testing of financial services modules including installment loans, credit cards, cash loans, and insurance products.
- Managed the complete testing lifecycle from test planning to execution and reporting.
- Created and maintained detailed test cases and test scripts based on business requirements.
- Identified, documented, and tracked defects using SysAid ticketing system.
- Communicated with clients regarding defect reports, providing clear reproduction steps and expected outcomes.
- Participated in regression testing to ensure new features didn't impact existing functionality.
- Conducted user acceptance testing to validate system performance against business requirements.
- Collaborated with development teams to ensure timely resolution of identified issues.
- Generated comprehensive test reports documenting test results and system quality.
- Performed cross-browser and cross-platform compatibility testing for web applications

Project / Client Name / Location : GHW-USA

Duration: 8 months

Project Description:

Great Health Works (GHW) is a leading health and wellness company specializing in direct-to-consumer sales of dietary supplements and wellness products. The company operates a subscription-based eCommerce platform that provides customers with a seamless shopping experience for health and wellness products. The platform includes features such as subscription management, one-time purchases, automated billing, order tracking, customer account management, and promotional campaigns.

The system is integrated with various third-party services, including payment gateways, CRM, marketing and fulfillment services to ensure smooth order processing and customer engagement. The platform supports multiple payment methods, recurring billing, and personalized product recommendations based on customer preferences.

Role: Jr. Software Engineer**Roles and Responsibilities:**

- Conducted functional, regression, UI, and system testing for the eCommerce platform.
- Tested subscription lifecycle features, including enrollment, modifications, cancellations, and renewals.
- Verified payment processing workflows for different payment methods
- Performed API testing to ensure seamless integration with third-party services.
- Executed cross-browser and mobile compatibility testing to enhance user experience.
- Validated order fulfillment, tracking, and CRM functionalities to ensure smooth customer transactions.
- Logged and tracked defects using Jira and worked closely with developers for resolution.
- Involved in UAT (User Acceptance Testing) to align with business requirements.
- Ensured compliance with security and data protection standards.

Project / Client Name / Location : GMMCO - India

Duration: 4 months

Project Description:

GMMCO Ltd. is a leading provider of construction and mining equipment, engines, and after-sales services. The company specializes in the sale, rental, and servicing of heavy machinery, catering to industries such as construction, mining, power generation, and infrastructure development.

The project involved testing GMMCO's ERP-based digital platform, which manages sales, equipment servicing, inventory tracking, customer orders, and warranty claims. The system enables dealership management, service request handling, spare parts management, and financial transactions to ensure efficient business operations.

Role: Jr. Software Engineer

Roles and Responsibilities:

- Analyzed business requirements and functional specifications to create comprehensive test plans and test scenarios.
- Defined test strategies for manual and automation testing based on project scope.
- Validated user interfaces to ensure responsiveness, accessibility, and consistency across devices and browsers.
- Ensured ease of navigation and user-friendliness for field service technicians and dealership staff.
- Conducted API testing to verify data exchange between ERP modules and third-party services.
- Performed database validation using SQL queries to ensure data integrity and correctness.
- Logged, tracked, and prioritized defects using JIRA (or other bug-tracking tools).
- Collaborated with developers, business analysts, and stakeholders to resolve issues efficiently.
- Supported business users in User Acceptance Testing by providing test scenarios, executing test cases.
